Off Signal Level  %

On Signal Level  %

Click ON “☒” to activate the turn-off function configuration. Choose “enable” or “disable”, and set the turn on and off dimming signal when “enable” selected. In turn off status, the driver will output minimum output voltage, please make sure the LED lamp can be turned off when applied with this level voltage.

## • Dimming Logic

☒ Dimming Logic

☒ Positive
 ☐ Negative

Click ON “☒” to activate the dimming logic configuration, default setting is “Positive” logic, it means the output current will increase with the dimming signal level up; and “Negative” logic will decrease the output current with dimming signal level up.

## • Set Minimum Dimming Level

☒ Set Min. Dimming Level

Min. Dimming Level  %

Set the minimum dimming output current, default setting is 10%

## • Dimming Signal Configuration

☒ Configure Dimming Signal

Signal Voltage setting:

Compliant with analog and PWM signal:  
 1) Analog: 0-10V  
 2) PWM: Low level-0V, High Level-10V

Click ON “☒” to activate dimming signal configuration, the dimming signal can be analog or PWM signal, here to set the value of the high level of these two signals, the setting can be:

0-3.3V, 0-5V, 0-9V, 0-10V

For example, if 0-10V is selected, the dimming signal will be:

- 1.) Analog: 0-10V.
- 2.) PWM: Low level-0V, High Level-10V.

This graph presents how the output current will react to the dimming signal, including analog and PWM dimming signal.

Click ON "☒" to activate Time Step Dimming configuration

Step(0): Setting the fading time of soft start, maximum value can be 10 seconds.

Step (1)-(7): Maximum time step number is 7, and the output current can be set according to the customer requirements to save energy.

The graph presents how the output current will react to the setting of time step dimming.

## • Configure NTC Protection

☒ Configure NTC Protection

☐ Enabel ☒ Disable

NTC Value: 90 °C

Click ON "☒" to activate NTC configuration Choose "enable" or "disable", and set NTC value when "enable" selected.

## • LED Lumen Compensation (LLC)

☒ LED Lumen Compensation

☐ Enabel ☒ Disable

Time (kHour)	Compensation(%)
1	
14	

Click ON "☒" to activate NTC configuration Choose "enable" or "disable", and set Time VS Compensation value when "enable" selected.

The compensation can be set for maximum 14 periods, "Time" Colum define the working hours for the defined "Compensation" ratio. For example, if "compensation" is set to 1%, and the corresponding "Time" is set to 10, that means the output current will be set to 101% of rated current for 10K hours at this interval.
